"GARDENS AND YOU"

A garden's smile is a
friendly smile,
In the radiant morning sun,
Through the blazing noon, in
the dream-filled dusk
When the tired day is done;
What a welcome breathes from
each shining leaf,
From each blossom drenched
in dew!
A garden's smile is a friendly
smile,
And so is the SMILE of YOU!

THE LIBIS GARDENS

THE GLADIOLUS

The following list of Gladiolus comprises, in our estimation, the best and most worthwhile of the standard varieties and of the recent introductions. There are many of the newer sorts listed here.

The bulbs offered are young, healthy, and vigorous, all fumigated as a precautionary measure, and properly stored to preserve their vitality.

You may select from this list with confidence for a garden of fine flowers.

Large size bulbs are $1\frac{1}{4}$ inches in diameter and up. Medium size bulbs are from $\frac{3}{4}$ of an inch to $1\frac{1}{4}$ inches in diameter. Small size bulbs are $\frac{3}{4}$ of an inch and less.

Bulbs are priced per 12 and per 100: six sold at the 12 rate; 50 at the 100 rate.

Abbreviations used in the Gladiolus list are:

Large--L.	Exhibition--Exh.
Medium--M.	Decorative--Dec.
Small--S.	Small Decorative--S. Dec.

GLADIOLUS

TREATMENT OF GLADIOLUS BULBS

MERCURIC CHLORIDE

(Corrosive Sublimate or Bichloride of Mercury)

The indispensable and universally accepted treatment of Gladiolus for disease cure and prevention is the Mercuric Chloride Treatment. Soak the bulbs over-night from eight to twelve hours in a solution of one ounce of mercuric chloride to seven gallons of water. Dissolve the mercuric chloride with hot water and mix with enough to make seven gallons, which should be 70°F. to be the most effective. Use a non-metal container. Bulbs should not be treated until planting time, and may be planted wet or allowed first to dry. This treatment is recommended for all gladiolus bulbs each year regardless of where obtained. It is an important factor for continued success with your gladiolus.

NEW SPRAY AGAINST THRIPS

Recommended by

The United States Department of Agriculture
Formula: 1 lb. Tartar Emetic, 4 lbs. Brown Sugar
25 gal. Water.

If Thrips are present in your growing Gladiolus, spray as needed for its control with Tartar Emetic. Reports from those who used it last year indicate it to be the most effective spray to date.

Protection of Perennials in Winter:

All perennials should be mulched the first winter after planting. The mulching of oriental poppies, peonies, and late planted irises in particular is your best insurance against loss.

Clean wheat or rye straw is a very good mulch. This gives ventilation as well as protection. It need not be extra heavy for best results. A mulch of three to four inches is sufficient.
